The study was conducted for CNN via telephone by SSRS, an independent research company. Interviews were conducted from **November 2, 2017 – November 5 2017** among a sample of **1,021** respondents. The landline total respondents were **411** and there were **610** of cell phone respondents. The margin of sampling error for total respondents is +/-3.6 at the 95% confidence level. The design effect is 1.4. More information about SSRS can be obtained by visiting **www.ssrs.com**.

**EMBARGOED FOR RELEASE:**
Monday, November 6 at 4:00 p.m.
Q1. (A1) Do you approve or disapprove of the way Donald Trump is handling his job as president?

**Question wording: The investigation into Russian interference in the 2016 election.

Q15. U.S. intelligence agencies have said that they believe the Russian government attempted to influence the outcome of the U.S. presidential election last year through hacking of political campaigns and the release of selected information. If this assessment is correct, do you think that would be a crisis for the United States, a major problem, a minor problem, or not a problem at all?

As you may have heard, the special counsel investigating Russian involvement in the 2016 election filed charges against two former Trump campaign officials, and a foreign policy advisor to the Trump campaign pleaded guilty to making a false statement to the FBI after he lied about his interactions with foreign officials close to the Russian government. Thinking about these charges...

Q19. Do you think the charges filed against some people involved in Trump’s campaign reflect...

<table>
<thead>
<tr>
<th>A widespread effort within the campaign to coordinate with Russia</th>
<th>An effort to coordinate with Russia that was limited to just a few people</th>
<th>There was no effort to coordinate with Russia (vol.)</th>

MORE ON METHODOLOGY

A total of 1,021 adults were interviewed by telephone nationwide by live interviewers calling both landline and cell phones. Interviews were conducted in English and Spanish. Among the entire sample, 32% described themselves as Democrats, 24% described themselves as Republicans, and 44% described themselves as independents or members of another party.

All respondents were asked questions concerning basic demographics, and the entire sample was weighted to reflect national Census figures for gender, race, age, education, region of country, and telephone usage.

Results for the full sample have a margin of sampling error of +/-3.6 percentage points. For the sample of 910 registered voters, it is +/-3.8 percentage points.

Crosstabs on the following pages only include results for subgroups with enough unweighted cases to produce a sampling error of +/-8.5 percentage points or less once adjusted for design effect. Some subgroups represent too small a share of the national population to produce crosstabs with an acceptable sampling error. Interviews were conducted among these subgroups, but results for groups with a design-effect adjusted sampling error larger than +/-8.5 percentage points are not displayed and instead are denoted with "N/A".

CNN/SSRS Poll -- November 02, 2017 to November 05, 2017

15. U.S. intelligence agencies have said that they believe the Russian government attempted to influence the outcome of the U.S. presidential election last year through hacking of political campaigns and the release of selected information. If this assessment is correct, do you think that would be a crisis for the United States, a major problem, a minor problem, or not a problem at all?
