

Statement from Lainie Keller, Vice President, Corporate Communications for Valeant Pharmaceuticals International, Inc.

Valeant comment

The safety of our products and the customers who use them are our company's highest priority. Shower to Shower is a safe and effective product, and the scientific and medical consensus is that these products do not cause ovarian cancer. It's important to note that the lawsuits nearly all allege use of Shower to Shower prior to 2012 when our company acquired the product. Given our limited role and the strong legal, factual and scientific defenses, we do not believe claims will be established successfully against our company.
