

CNN January 2018

The study was conducted for CNN via telephone by SSRS, an independent research company. Interviews were conducted on **January 30, 2018** among a sample of **549** respondents. The margin of sampling error for total respondents is +/-4.2 at the 95% confidence level. Survey respondents were first interviewed as part of a random national sample conducted January 14-18, 2018 on the CNN January Poll as well as on January 24-28, 2018 on the SSRS Omnibus. January 25-28, 2018 respondents were also recruited via the SSRS Web Probability Panel. This panel is constructed from a random sample of the U.S. population recruited through the SSRS Omnibus, an overlapping-frame (cell phone and landline) RDD telephone survey. In those interviews, respondents indicated they planned to watch tonight's speech and were willing to be re-interviewed after the speech. More information about SSRS can be obtained by visiting www.ssrs.com. Unless otherwise noted, results beginning with the March 31-April 2, 2006 survey and ending with the April 22-25, 2017 survey are from surveys conducted by ORC International. Results before March 31, 2006 are from surveys conducted by Gallup.

Q101. What was your overall reaction to President Trump's speech tonight – very positive, somewhat positive, somewhat negative or very negative?

	Very positive	Somewhat positive	Somewhat negative	Very negative	Both/Mixed (vol.)	No opinion

MORE ON METHODOLOGY

A total of **549** adults were interviewed by telephone nationwide by live interviewers calling both landline and cell phones. Interviews were conducted in English and Spanish. Interviews were conducted January 30, 2018. Among the entire sample, **26%** described themselves as Democrats, **31%** described themselves as Republicans, and **42%** described themselves as independents or members of another party.

Results for the full sample have a margin of sampling error of **+/-4.2** percentage points.

Crosstabs on the following pages only include results for subgroups with enough unweighted cases to produce a sampling error of +/-8.5 percentage points or less. Some subgroups represent too small a share of the national population to produce crosstabs with an acceptable sampling error. Interviews were conducted among these subgroups, but results for groups with a sampling error larger than +/-8.5 percentage points are not displayed and instead are denoted with "N/A".
