

The study was conducted for CNN via telephone by SSRS, an independent research company. Interviews were conducted from October 04, 2018 to October 07,2018 among a sample of $\mathbf{1 , 0 0 9}$ respondents. The landline total respondents were 407 and there were 602 cell phone respondents. The margin of sampling error for total respondents is $+/-3.8$ at the $95 \%$ confidence level, for results among the 920 registered voters it is $+/-4.0$, and for results among the $\mathbf{7 3 9}$ likely voters it is +/-4.4. The design effect is 1.51 . More information about SSRS can be obtained by visiting www.ssrs.com. Unless otherwise noted, results beginning with the March 31-April 2, 2006 survey and ending with the April 22-25, 2017 survey are from surveys conducted by ORC International. Results before March 31, 2006 are from surveys conducted by Gallup.

EMBARGOED FOR RELEASE:
Sunday, October 14 at 9:00 a.m.

Q28. As you may have heard, Donald Trump has decided to run for re-election. Please just give me your best guess, do you think he will win the presidential election in 2020, or do you think he will lose?

|  | Will win | Will lose | No opinion |

| Not Trump/No name given | $11 \%$ |
| Don't know/Refused | $4 \%$ |
| No opinion | $6 \%$ |

## MORE ON METHODOLOGY

A total of 1,009 adults were interviewed by telephone nationwide by live interviewers calling both landline and cell phones. Interviews were conducted in English and Spanish. Among the entire sample, 31\% described themselves as Democrats, $25 \%$ described themselves as Republicans, and $44 \%$ described themselves as independents or members of another party.

All respondents were asked questions concerning basic demographics, and the entire sample was weighted to reflect national Census figures for gender, race, age, education, region of country, and telephone usage.

Results for the full sample have a margin of sampling error of $+/-3.8$ percentage points. For the sample of 920 registered voters and adults who plan to register to vote before Election Day, it is $+/-4.0$ percentage points. For the sample of 739 likely voters, it is +/- 4.4 percentage points.

Crosstabs on the following pages only include results for subgroups with enough unweighted cases to produce a sampling error of $+/-8.5$ percentage points or less once adjusted for design effect. Some subgroups represent too small a share of the national population to produce crosstabs with an acceptable sampling error. Interviews were conducted among these subgroups, but results for groups with a design-effect adjusted sampling error larger than +/-8.5 percentage points are not displayed and instead are denoted with "N/A".
