OVERVIEW

The study was conducted for CNN via telephone by SSRS, an independent research company. Interviews were conducted from September 22, 2019 to September 26, 2019 among a sample of **1,203** respondents who live in Nevada. The landline total respondents were **424** and there were **779** cell phone respondents. The margin of sampling error for total respondents is +/-3.6 at the 95% confidence level, and for results among the 324 respondents who are likely to participate in the Democratic caucus it is +/-7.1. The design effect is 1.59. More information about SSRS can be obtained by visiting www.ssrs.com.

Question text noted in parentheses was rotated or randomized.

NOTE ABOUT CROSSTABS

Interviews were conducted among a representative sample of the adult population, age 18 or older, of Nevada. Members of demographic groups not shown in the published crosstabs are represented in the results for each question in the poll. Crosstabs on the pages that follow only include results for subgroups with a minimum n=125 unweighted cases. Results for subgroups with fewer than n=125 unweighted cases are not displayed and instead are denoted with "**SN**" because samples of that size carry larger margins of sampling error and can be too small to be projectable with confidence to their true values in the population.

MORE ON METHODOLOGY

A total of **1,203** adults who live in Nevada were interviewed by telephone by live interviewers calling both landline and cell phones. Interviews were conducted in English and Spanish. Among the entire sample, 33% described themselves as Democrats, 25% described themselves as Republicans, and 42% described themselves as independents or members of another party

All respondents were asked questions concerning basic demographics, and the entire sample was weighted to reflect Census figures for gender, race, age, education, state region, and telephone usage.

Results for the full sample have a margin of sampling error of +/- 3.6 percentage points. For the subset of 324 respondents who are likely to participate in the Democratic caucus, it is +/- 7.1 percentage points.

Interviews were conducted among a representative sample of the adult population, age 18 or older, of Nevada. Members of demographic groups not shown in the published crosstabs are represented in the results for each question in the poll. Crosstabs on the pages that follow only include results for subgroups with a minimum n=125 unweighted cases. Results for subgroups with fewer than n=125 unweighted cases are not displayed and instead are denoted with "**SN**" because samples of that size carry larger margins of sampling error and can be too small to be projectable with confidence to their true values in the population.
