

## WISCONSIN

### SUMMARY

- Wisconsin is in the yellow zone for cases, indicating between 10 and 100 new cases per 100,000 population last week, with the 24th highest rate in the country. Wisconsin is in the yellow zone for test positivity, indicating a rate between 5% and 10%, with the 25th highest rate in the country.
- Wisconsin has seen stability in new cases and an increase in test positivity over the last week.
- Virus transmission is seen in all areas of the state. The following three counties had the highest number of new cases over the last 3 weeks: 1. Milwaukee County, 2. Brown County, and 3. Waukesha County. These counties represent 33.6% of new cases in Wisconsin.
- Cases in major urban counties (Milwaukee, Waukesha, Brown) continued to decline, reflecting the impact of mitigation measures. Dane County, home to University of Wisconsin, reported stable cases last week. Multiple less-urban counties reported high incidences and/or increases in incidence and test positivity.
- The University of Wisconsin-Madison reported sharp increases in the number of students testing positive with more than 350 cases in the week through Sep 5 from on-campus testing and 133 more reported from off-campus testing. The university is now requiring all approximately 1,500 students who live in fraternity and sorority chapter houses be tested. Large social gatherings have been held at houses despite university rules.
- 58% of all counties in Wisconsin have moderate or high levels of community transmission (yellow or red zone), with 14% having high levels of community transmission (red zone).
- During the week of Aug 24 – Aug 30, 3% of nursing homes had at least one new resident COVID-19 case, 12% of nursing homes had at least one new staff COVID-19 case, and 1% of nursing homes had at least one new resident COVID-19 death.
- Wisconsin had 92 new cases per 100,000 population in the last week, compared to a national average of 88 per 100,000.
- Current staff deployed from the federal government as assets to support the state response are: 9 to support operations activities from FEMA; 2 to support testing activities from CDC; 7 to support epidemiology activities from CDC; 1 to support operations activities from USCG; and 20 to support medical activities from VA.
- Between Aug 29 - Sep 04, on average, 57 patients with confirmed COVID-19 and 79 patients with suspected COVID-19 were reported as newly admitted each day to hospitals in Wisconsin. An average of 91% of hospitals reported either new confirmed or new suspected COVID patients each day during this period; therefore, this may be an underestimate of the actual total number of COVID-related hospitalizations. Underreporting may lead to a lower allocation of critical supplies.

### RECOMMENDATIONS

- Using the Abbott BinaxNOW, establish weekly surveillance in critical populations to monitor degree of community spread among K-12 teachers; staff working at nursing homes, assisted living, and other congregate living settings; and first responders.
- Recommendations specific to institutions of higher education (IHE) are highlighted below given the concerning trends nationally and the need to intensify efforts to control COVID-19 among university students and minimize spread to local communities.
- IHE should increase testing capacity by expanding public-private partnerships; increasing the budget and capacity of public health labs; pooling specimens where appropriate; and utilizing all university, veterinary and research platforms for surveillance and testing of students and, if needed, the surrounding communities.
- Require all universities and colleges to have a plan for both rapid testing and contact tracing of symptomatic students and periodic surveillance testing of students, with quick turnaround times for results, and rapid isolation of cases and quarantine of contacts; residential cases and contacts should not be sent home to isolate or quarantine.
- Recruit college and university students to expand public health messaging and contact tracing capacity and protect local communities by strict mask wearing and social distancing off campus.
- Universities and colleges must work with various student leaders and campus media to support compliance with recommendations.
- Explore use of focused wastewater surveillance to detect cases early and to direct diagnostic testing and public health interventions.
- University students with or exposed to COVID-19 must have isolation, quarantine and care sites on or near campus and not be returned home to multigenerational households where additional transmission could occur.
- Ensure all universities can fully test, isolate, and conduct contact tracing in collaboration with local public health authorities. Support university officials in messaging to students about the importance of full cooperation.
- Ensure all nursing homes, assisted living, and elderly care sites follow CMS staff testing requirements and, if cases within local universities rise, increase testing even further to prevent spread from students to residents through staff. Expanding nursing home cases must be controlled with aggressive testing of all staff and isolation of positive residents.
- Support local authorities in outreach to restaurant and bar business owners in college communities regarding enforcement of masking and limitations on occupancy as well as other limitations on student patronage; encourage local ordinances in these communities to allow enforcement of social distancing and mask mandates for off-campus events.
- Support a uniform case-reporting process for IHE and reporting of this data on university public-facing dashboards.
- Specific, detailed guidance on community mitigation measures can be found on the [CDC website](#).

**Testing:** Combination of CELR (COVID-19 Electronic Lab Reporting) state health department-reported data and HHS Protect laboratory data (provided directly to Federal Government from public health labs, hospital labs, and commercial labs) through 9/2/2020. Last week is 8/27 - 9/2; the week one month before is 7/30 - 8/5.

# METHODS

STATE REPORT | 09.06.2020

**COLOR THRESHOLDS:** Results for each indicator should be taken in context of the findings for related indicators (e.g., changes in case incidence and testing volume)

| Metric   | Green  | Yellow     | Red   |
|--|--------|------------|-------|
| New cases per 100,000 population per week                                  | <10    | 10-100     | >100  |
| Percent change in new cases per 100,000 population                         | <-10%  | -10% - 10% | >10%  |
| Diagnostic test result positivity rate                                     | <5%    | 5%-10%     | >10%  |
| Change in test positivity  | <-0.5% | -0.5%-0.5% | >0.5% |
| Total diagnostic tests resulted per 100,000 population per week            | >1000  | 500-1000   | <500  |
| Percent change in tests per 100,000 population                             | >10%   | -10% - 10% | <-10% |
| COVID-19 deaths per 100,000 population per week                            | <1     | 1-2        | >2    |
| Percent change in deaths per 100,000 population                            | <-10%  | -10% - 10% | >10%  |
| Skilled Nursing Facilities with at least one resident COVID-19 case, death | <1%    | 1%-5%      | >5%   |
| Change in SNFs with at least one resident COVID-19 case, death             | <-1%   | -1%-1%     | >1%   |

## DATA NOTES

- Some dates may have incomplete data due to delays in reporting. Data may be backfilled over time, resulting in week-to-week changes. It is critical that states provide as up-to-date data as possible.
- Cases and deaths:** County-level data from USAFacts as of 22:00 EDT on 09/06/2020. State values are calculated by aggregating county-level data from USAFacts; therefore, values may not match those reported directly by the state. Data are reviewed on a daily basis against internal and verified external sources and, if needed, adjusted. Last week data are from 8/29 to 9/4; previous week data are from 8/22 to 8/28; the week one month before data are from 8/1 to 8/7.
- Testing:** The data presented represent viral COVID-19 laboratory diagnostic and screening test (reverse transcription polymerase chain reaction, RT-PCR) results—not individual people—and exclude antibody and antigen tests. CELR (COVID-19 Electronic Lab Reporting) state health department-reported data are used to describe county-level viral COVID-19 laboratory test (RT-PCR) result totals when information is available on patients' county of residence or healthcare providers' practice location. HHS Protect laboratory data (provided directly to Federal Government from public health labs, hospital labs, and commercial labs) are used otherwise. Some states did not report on certain days, which may affect the total number of tests resulted and positivity rate values. Because the data are deidentified, total viral (RT-PCR) laboratory tests are the number of tests performed, not the number of individuals tested. Viral (RT-PCR) laboratory test positivity rate is the number of positive tests divided by the number of tests performed and resulted. Resulted tests are assigned to a timeframe based on this hierarchy of test-related dates: 1. test date; 2. result date; 3. specimen received date; 4. specimen collection date. Resulted tests are assigned to a county based on a hierarchy of test-related locations: 1. patient residency; 2. provider facility location; 3. ordering facility location; 4. performing organization location. States may calculate test positivity other using other methods. Last week data are from 8/27 to 9/2; previous week data are from 8/20 to 8/26; the week one month before data are from 7/30 to 8/5. HHS Protect data is recent as of 11:30 EDT on 09/06/2020. Testing data are inclusive of everything received and processed by the CELR system as of 19:00 EDT on 09/05/2020.
- Mobility:** Descartes Labs. These data depict the median distance moved across a collection of mobile devices to estimate the level of human mobility within a locality. The 100% represents the baseline mobility level prior to the pandemic; lower percent mobility indicates less population movement. Data is anonymized and provided at the locality level. Data is recent as of 13:00 EDT on 09/06/2020 and is through 9/4/2020.
- Hospitalizations:** Unified hospitalization dataset in HHS Protect. This figure may differ from state data due to differences in hospital lists and reporting between federal and state systems. These data exclude psychiatric, rehabilitation, and religious non-medical hospitals. In addition, hospitals explicitly identified by states/regions as those from which we should not expect reports were excluded from the percent reporting figure. The data presented represents raw data provided; we are working diligently with state liaisons to improve reporting consistency. Data is recent as of 15:00 EDT on 09/06/2020.
- Skilled Nursing Facilities:** National Healthcare Safety Network (NHSN). Data report resident and staff cases independently. Quality checks are performed on data submitted to the NHSN. Data that fail these quality checks or appear inconsistent with surveillance protocols may be excluded from analyses. Data presented in this report are more recent than data publicly posted by CMS. Last week is 8/17-8/23, previous week is 8/24-8/30.
